CV041 Tilting Conveyor

Edgetech's CV041 Tilting Conveyor is designed for supporting panels being sprayed with adhesives. The rollers make it easy to transfer parts in and out of a spray booth with side openings. When spraying panels with builddowns, the CV041 can be pivoted forward or backward to allow for easier and more consistent application of the adhesive. The conveyor can be positioned in two angled positions in either direction by means of a pneumatically retracted pin. Shields are provided below the rollers and at the sides of the upper frame.

Standard Features

- Welded steel frame
- Plastic shields to protect conveyor frame
- Pivots pneumatically to two angle positions tilted forward and back.

CV041 Tilting Conveyor Specifications

Submit profiles for review. Some restrictions may apply to combinations of these dimensions.

| | |
|-------------------------------|--------------|
| Model | CV041 |
