DLL950 Dual Laser Alignment Kit

Edgetech's Dual Laser provides two crisp parallel lines that are spaced the same width as the saw blade. This eliminates any question regarding where the cut will be made, as is the case with laser lines that are wider than the width of the blade. The spacing can be adjusted to match the width of any typical saw blade.

The support arm mounts on the upper frame of the saw and the electrical control box mounts on the exterior of the existing electrical box at the rear of the saw. A switch on the control box turns the laser on/off.

Mounting instructions are included with the kit.

Laser arm mounted on an Edgetech saw

Standard Features

- Solid state diode lasers
- Rugged support arm and hinged cover
- Electrical enclosure with on/off switch
- Alignment fixture for positioning lasers during setup
- 110-240V AC
